

Week 15 - Science

Hi everyone. This week your teachers would like to set you another science challenge.

Your task

Animals are classified into different groups according to their features. Last week you found out mammals and birds. This week we would like you to find out what the features are of fish, reptiles and amphibians. Can you also find different examples of types of fish, reptile and amphibian.

You can then present what you have found out as a powerpoint, poster, piece of written work, however you want.

Once you have completed the challenge it can be emailed over to Ms Clark - bclark@appleton.hull.sch.uk as a document or photograph. We will then post some special mentions on the school Twitter feed later in the week.

Final entries to be submitted by 12.00 Fri 26th June 2020
