# Addition

	<b>Concrete</b>	<b>Pictorial</b>	<b>Abstract</b>
<b>Regrouping to make 10</b>	<p>Start with the bigger number and use the smaller number to make 10. Bead strings or 10 frames and objects can be used to illustrate addition including bridging through ten by counting on 2 then counting on 3.</p> <p>A bead string with 5 red beads and 6 white beads. Below it, a 10 frame with 5 purple beads and 6 orange beads. The equation <math>5 + 6 = 11</math> is written next to the 10 frame.</p>	<p>Use pictures or a number line. Regroup or partition the smaller number to make 10.</p> $6 + 5 = 11$ <p><math>3 + 9 =</math></p>	<p>Bridging through ten can help children become more efficient.</p> $37 + 15 = 52$
<b>Adding 3 single digit</b>	<p><math>4 + 7 + 6 = 17</math> Put 4 and 6 together to make 10. Add on 7.</p> <p>Three bead strings: two with 4 and 6 red beads, and one with 7 red beads.</p> <p>Following on from making 10, make 10 with 2 of the digits (if possible) then add on the third digit.</p>	<p>Add together three groups of objects. Draw a picture to recombine the groups to make 10.</p> <p>Three groups of candies: 4, 7, and 6. Below them, the same candies are recombined into 10 and 7.</p>	<p>Combine the two numbers that make 10 and then add on the remainder.</p> $\textcircled{4} + 7 + \textcircled{6} = \boxed{10} + \boxed{7}$ $= \boxed{17}$

# Addition

	Concrete	Pictorial	Abstract																																				
Column, no regrouping	<p>Add together the ones first then add the tens. Use the Base 10 blocks first <i>before moving onto place value counters.</i></p> <p><math>24 + 15 =</math></p> <table border="1"> <thead> <tr> <th>Tens</th> <th>Ones</th> </tr> </thead> <tbody> <tr> <td></td> <td></td> </tr> <tr> <td></td> <td></td> </tr> <tr> <td><b>30</b></td> <td><b>9</b></td> </tr> </tbody> </table>	Tens	Ones					<b>30</b>	<b>9</b>	<p>After practically using the base 10 blocks and place value counters, children can draw the counters to help them to solve additions.</p> <p><math>33 + 26 =</math></p> <table border="1"> <thead> <tr> <th>Tens</th> <th>Ones</th> </tr> </thead> <tbody> <tr> <td></td> <td></td> </tr> <tr> <td></td> <td></td> </tr> <tr> <td><b>50</b></td> <td><b>9</b></td> </tr> </tbody> </table>	Tens	Ones					<b>50</b>	<b>9</b>	<p>Children use informal pencil and paper methods (jottings) to support, record and explain partial mental methods building on existing mental strategies. They begin to use an expanded layout that underpins the standard written method.</p> $\begin{array}{r} 85 = 80 + 5 \\ + 46 \quad 40 + 6 \\ \hline 120 + 11 = 131 \end{array}$

# Subtraction

	Concrete	Pictorial	Abstract
Taking away ones	<p>Use physical objects, counters, cubes etc., to show how objects can be taken away.</p> 	<p>Cross out drawn objects to show what has been taken away.</p> 	$18 - 3 = 15$ $8 - 2 = 6$
Counting back	<p>Make the larger number in your subtraction. Move the beads along your bead string as you count backwards in ones.</p>  <p><math>13 - 4 = 11</math></p> <p>Use counters and move them away from the group as you take them away counting backwards as you go.</p> 	<p>Children to also use number lines to count back.</p> <p>10 and 4 less</p>  <p>Start at the bigger number and count back the smaller number showing the jumps on the number line.</p>  <p>This can progress all the way to counting back using two 2 digit numbers. Then helping children to become more efficient by subtracting the units in one jump (by using the known fact <math>7 - 3 = 4</math>). Subtracting the tens in one jump and the units in one jump. Bridging through ten can help children become more efficient.</p> <p><math>42 - 25 = 17</math></p> 	$18 - 3 = 15$ $8 - 2 = 6$

Counting on – finding the difference

Compare amounts and objects to find the difference.

Use cubes to build towers or make bars to find the difference.

Use basic bar models with items to find the difference.

A teddy costs 50p and doll costs 20p. How much more does the teddy cost?

Using a number line to count on.

When dealing with larger numbers, the number line should still show 0 so children can cross out the section from 0 to the smallest number. They then associate this method with 'taking away'.

Using the bar method.

$$18 - 3 = 15$$

$$8 - 2 = 6$$

Part part whole

Link to addition- use the part whole model to help explain the inverse between addition and subtraction.

If 10 is the whole and 6 is one of the parts. What is the other part?

$$10 - 6 = ?$$

Use a pictorial representation of objects to show the part-part whole model.

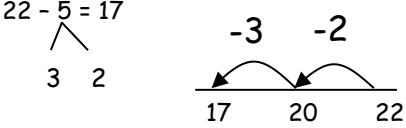

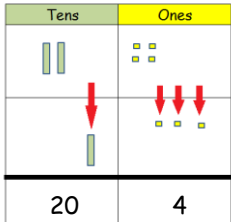

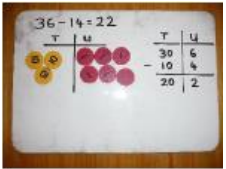

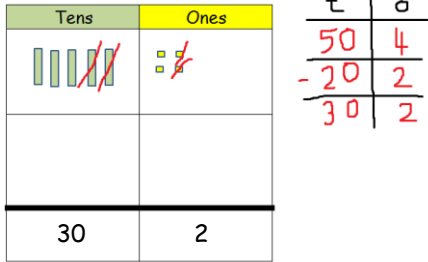

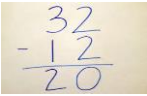

Move to using numerals within the part whole model.

# Subtraction

	Concrete	Pictorial	Abstract
Make 10	<p>Make 14 on the ten frame. Take away the four first to make 10 and then takeaway one more so you have taken away 5. You are left with the answer of 9.</p> <p><math>14 - 5 = 9</math></p> 	<p>Using a numberline whilst partitioning the number you're subtracting.</p> <p>Start at 22. Take away 2 to reach 20. Then take away the remaining 3 so you have taken away 5 altogether. You have reached your answer.</p> <p><math>22 - 5 = 17</math></p> 	<p><math>16 - 8 =</math></p> <p>How many do we take off to reach the next 10?</p> <p>How many do we have left to take off?</p>
Column method without regrouping	<p>Use Base 10 to make the bigger number then take the smaller number away. Always write the calculation alongside, as seen in the example below.</p> <p><math>37 - 13 =</math></p>  <p>Show how you partition numbers to subtract. Again make the larger number first.</p> 	<p>Draw the Base 10 or place value counters alongside the written calculation to help to show working.</p> 	<p>Initially, the children will be taught using examples that do not need the children to exchange.</p> <p>Partitioning and decomposition.</p> <p>e.g.</p> $89 = 80 + 9$ $- 57$ $30 + 2 =$ <p>32</p> <p>This will eventually lead to:</p> 

### Column method with regrouping

Use Base 10 to start with before moving on to *place value counters*. Start with one exchange before moving onto subtractions with 2 exchanges.

Make the larger number with the place value counters

Hundreds	Tens	Ones	Calculation
■ ■		□□□□	234
			- 88
<hr/>			

Start with the ones, can I take away 8 from 4 easily? I need to exchange one of the tens for ten ones.

Hundreds	Tens	Ones	Calculation
■ ■		□□□□	234
		□□□□	- 88
<hr/>			

Now I can subtract the ones.

Now look at the tens, can I take away 8 tens easily? I need to exchange one hundred for ten tens. Now I can take away eight tens and complete the subtraction.

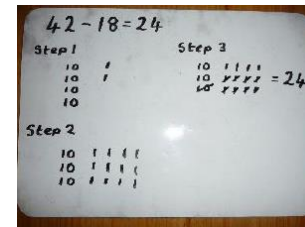

Hundreds	Tens	Ones	Calculation
■ ■		□□□□	234
		□□□□	- 88
<hr/>			

Draw the counters onto a place value grid and show what you have taken away by crossing the counters out as well as clearly showing the exchanges you make.

Hundreds	Tens	Ones	Calculation
■ ■ ■ ■ ■		□□□□	234
<del>■ ■ ■</del> <del>■ ■</del>	<del>  </del>	<del>□□□□</del>	- 88
<hr/>			
500 600	120	6	
- 200	70	5	
<hr/>			
300	50	1	

When confident, children can find their own way to record the exchange/regrouping.

Just writing the numbers as shown here shows that the child understands the method and knows when to exchange/regroup.

Where the numbers are involved in the calculation are close together or near to multiples of 10, 100 etc., counting on using a number line should be used.

**Partitioning and decomposition**  
Children can start their formal written method by partitioning the number into clear place value columns.

$$\begin{array}{r}
 754 = \\
 - 86 \\
 \hline
 \text{Step 1} \quad \text{H} \quad \text{T} \quad \text{O} \\
 700 + 50 + 4 \\
 - \quad \quad \quad 80 + 6 \\
 \hline
 \end{array}$$

$$\begin{array}{r}
 \text{Step 2} \quad \text{H} \quad \text{T} \quad \text{O} \\
 700 + 40 + 14 \\
 \text{(exchange T-O)} \\
 - \quad \quad \quad 80 + 6 \\
 \hline
 \end{array}$$

$$\begin{array}{r}
 \text{Step 3} \quad \text{H} \quad \text{T} \quad \text{O} \\
 600 + 140 + 14 \\
 \text{(exchange H-T)} \\
 - \quad \quad \quad 80 + 6 \\
 \hline
 600 + 60 + 8 = \\
 668
 \end{array}$$

This would be recorded by the children as

$$\begin{array}{r}
 600 \quad 140 \\
 \del{700} + \del{50} + 14 \\
 - \quad \quad \quad 80 + 6 \\
 \hline
 600 + 60 + 8 = \\
 668
 \end{array}$$

**Decomposition**

Show the written methods beside to gather understanding.

When children are secure with the previous method they move on to decomposition.

$$\begin{array}{r} 614 \phantom{1} \\ \cancel{7}4 \\ - 86 \\ \hline 668 \end{array}$$

National Curriculum Guidance

**Addition and subtraction**

789 + 642 becomes

$$\begin{array}{r} 789 \\ + 642 \\ \hline 1431 \\ \hline 1 \quad 1 \end{array}$$

Answer: 1431

874 - 523 becomes

$$\begin{array}{r} 874 \\ - 523 \\ \hline 351 \end{array}$$

Answer: 351

932 - 457 becomes

$$\begin{array}{r} 8 \quad 12 \quad 1 \\ \cancel{9} \quad \cancel{3} \quad 2 \\ - 4 \quad 5 \quad 7 \\ \hline 4 \quad 7 \quad 5 \end{array}$$

Answer: 475

932 - 457 becomes

$$\begin{array}{r} 1 \quad 1 \\ 9 \quad 3 \quad 2 \\ - \cancel{4} \quad \cancel{5} \quad 7 \\ \hline 5 \quad 6 \\ \hline 4 \quad 7 \quad 5 \end{array}$$

Answer: 475

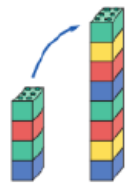

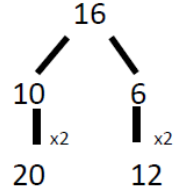

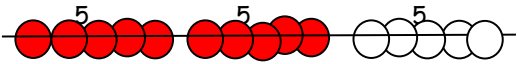

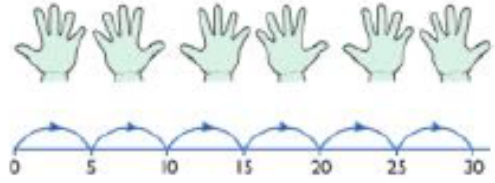

# Multiplication

Multiply 2-digit by 2-digit numbers	5	Place value counters Base 10	Short written method Grid method
Multiply 2-digit by 3-digit numbers	5	Place value counters Grid method	Short written method
Multiply 2-digit by 4-digit numbers	5/6	Formal written method	

# Multiplication

	Concrete	Pictorial	Abstract
Doubling	<p>Use practical activities to show how to double a number.</p>  <p>double 4 is 8 <math>4 \times 2 = 8</math></p>	<p>Draw pictures to show how to double a number.</p> <p>Double 8</p> 	<p>Partition a number and then double each part before recombining it back together.</p> 
Counting in multiples	<p>Count in multiples supported by concrete objects in equal groups (<b>commutativity</b>).</p>  <p>Show on bead bar or on a number line:</p> <p><math>3 \times 5 = 5 + 5 + 5</math></p> 	<p>Use a number line or pictures to continue support in counting in multiples.</p> 	<p>Count in multiples of a number aloud.</p> <p>Write sequences with multiples of numbers.</p> <p>2, 4, 6, 8, 10</p> <p>5, 10, 15, 20, 25, 30</p>

Repeated addition

Use different objects to add equal groups.

Children will develop their understanding of multiplication and use jottings to support calculation:

Repeated addition can be shown easily on a number line:

Using symbols to stand for unknown numbers to complete equations using inverse operations

- $\square \times 5 = 20$
- $3 \times \triangle = 18$
- $\square \times 0 = 32$

Arrays – Showing commutative multiplication

Create arrays using counters/ cubes to show multiplication sentences.

Children should be able to model a multiplication calculation using an array.

Arrays can be drawn in different rotations to find **commutative** multiplication sentences.

Use an array to write multiplication sentences and reinforce repeated addition.

e.g.

$5 + 5 + 5 = 15$   
 $3 + 3 + 3 + 3 + 3 = 15$   
 $5 \times 3 = 15$   
 $3 \times 5 = 15$

Grid method  
– NOT in  
national  
curriculum

Show the link with arrays to first introduce the grid method.  
e.g.  $13 \times 4 =$

Move on to using Base 10 to move towards a more compact method.

Move on to *place value counters* to show how we are finding groups of a number. We are multiplying by 4 so we need 4 rows.

Children can represent the work they have done with place value counters in a way that they understand.

They can draw the counters, using colours to show different amounts or just use circles in the different columns to show their thinking as shown below.

This can be followed by the formal written grid method.

**TU x TU**

$72 \times 38$

Children will approximate first:

$72 \times 38$  is approximately  $70 \times 40 = 2800$

x	70	2	
30	2100	60	2100
8	560	16	+ 560
			+ 60
			+ 16
			<u>2736</u>

1

Grid method used for area work.

Fill four rows with 126.

Calculations  
 $4 \times 126$

Add them together making any appropriate exchanges (see addition section).

Column multiplication

**Short multiplication**

$24 \times 6$  becomes

$$\begin{array}{r} 24 \\ \times 6 \\ \hline 144 \\ \hline 2 \end{array}$$

Answer: 144

$342 \times 7$  becomes

$$\begin{array}{r} 342 \\ \times 7 \\ \hline 2394 \\ \hline 21 \end{array}$$

Answer: 2394

$2741 \times 6$  becomes

$$\begin{array}{r} 2741 \\ \times 6 \\ \hline 16446 \\ \hline 42 \end{array}$$

Answer: 16 446

**Long multiplication** $24 \times 16$  becomes

$$\begin{array}{r} \phantom{2} 2 \phantom{4} \\ \phantom{2} 2 \phantom{4} \\ \times \phantom{2} 1 \phantom{6} \\ \hline 2 \phantom{4} 0 \\ 1 \phantom{4} 4 \\ \hline 3 \phantom{8} 4 \end{array}$$

Answer: 384

 $124 \times 26$  becomes

$$\begin{array}{r} \phantom{1} 1 \phantom{2} \\ \phantom{1} 1 \phantom{2} 4 \\ \times \phantom{1} 2 \phantom{6} \\ \hline 2 \phantom{4} 8 \phantom{0} \\ \phantom{2} 7 \phantom{4} 4 \\ \hline 3 \phantom{2} 2 \phantom{2} 4 \\ \hline 1 \phantom{1} \end{array}$$

Answer: 3224

 $124 \times 26$  becomes

$$\begin{array}{r} \phantom{1} 1 \phantom{2} \\ \phantom{1} 1 \phantom{2} 4 \\ \times \phantom{1} 2 \phantom{6} \\ \hline 7 \phantom{4} 4 \\ \phantom{7} 4 \phantom{8} 0 \\ \hline 3 \phantom{2} 2 \phantom{2} 4 \\ \hline 1 \phantom{1} \end{array}$$

Answer: 3224

Division

# Division

	Concrete	Pictorial	Abstract
Sharing into groups	<p>Children will understand equal groups and share items out in play and problem solving.</p> <p>e.g., <math>6 \div 3 =</math></p> 	<p>Children will develop their understanding of division and use jottings to support calculation.</p> <p>e.g., <math>6 \div 2 =</math></p>  <p><math>20 \div 4 =</math></p>	<p>Share 9 buns between three people.</p> <p><math>9 \div 3 = 3</math></p> <p>Using symbols to stand for unknown numbers to complete equations using inverse operations</p> <p><math>\square \div 2 = 4</math>  <math>20 \div \square = 4</math>  <math>\square \div \square = 4</math></p>
Division with a remainder	<p>Divide objects between groups and see how much is left over. E.g. <math>14 \div 3 = 4</math> remainder 2.</p> 	<p>Children may use an empty number line to support their calculation. Children should also move onto calculations involving remainders.</p> <p><math>13 \div 4 = 3 \text{ r } 1</math></p>  <p>Draw dots and group them to divide an amount and clearly show a remainder.</p>  <p>remainder 2</p>	<p>Complete written divisions and show the remainder using r.</p> <p><math>32 \div 5 = 6 \text{ r } 2</math></p>

## Short division

Use place value counters to divide using the bus stop method. Place the counters in the bus stop, partitioning the tens and ones. Then place them into groups. For example;  $96 \div 3 = 3$  rows of 30 and 3 rows of 2.

$$42 \div 3 =$$

Start with the biggest place value, we are sharing 40

Calculations  
 $42 \div 3$

into three groups. We can put 1 ten in each group and we have 1 ten left over.

We exchange this ten for ten ones and then share the ones equally among the groups.

We look how much in 1 group so the answer is 14.

Short and long division

**Short division**

98 ÷ 7 becomes

$$\begin{array}{r} 14 \\ 7 \overline{) 98} \\ \underline{7} \phantom{0} \\ 28 \\ \underline{28} \\ 0 \end{array}$$

Answer: 14

432 ÷ 5 becomes

$$\begin{array}{r} 86 \text{ r}2 \\ 5 \overline{) 432} \\ \underline{40} \phantom{0} \\ 32 \\ \underline{30} \\ 2 \end{array}$$

Answer: 86 remainder 2

496 ÷ 11 becomes

$$\begin{array}{r} 45 \text{ r}1 \\ 11 \overline{) 496} \\ \underline{44} \phantom{0} \\ 56 \\ \underline{55} \\ 1 \end{array}$$

Answer:  $45 \frac{1}{11}$

**Long division**

432 ÷ 15 becomes

$$\begin{array}{r} 28 \text{ r}12 \\ 15 \overline{) 432} \\ \underline{30} \phantom{0} \\ 132 \\ \underline{150} \\ 120 \\ \underline{120} \\ 0 \end{array}$$

Answer: 28 remainder 12

432 ÷ 15 becomes

$$\begin{array}{r} 28 \\ 15 \overline{) 432} \\ \underline{30} \phantom{0} \\ 132 \\ \underline{150} \\ 120 \\ \underline{120} \\ 0 \end{array} \begin{array}{l} 15 \times 20 \\ 15 \times 8 \end{array}$$

$$\frac{12}{15} = \frac{4}{5}$$

Answer:  $28 \frac{4}{5}$

432 ÷ 15 becomes

$$\begin{array}{r} 28.8 \\ 15 \overline{) 432.0} \\ \underline{30} \phantom{0} \\ 132 \\ \underline{150} \\ 120 \\ \underline{120} \\ 0 \end{array}$$

Answer: 28.8

## Division as grouping

Divide quantities into equal groups.  
Use cubes, counters, objects or place value counters to aid understanding.

$$96 \div 3 = 32$$

Use a number line to show jumps in groups. The number of jumps equals the number of groups (repeated subtraction).

For bar method, split it into the number of groups you are dividing by and work out how many would be within each group.
